

INTRODUCING SOLSTICE: ADVANCED PLATING FOR THE REST OF US!

**DESIGNED FOR 100-200MM APPS.
HALF THE BIG GUYS' PRICE!**

Now: a cost-effective route to volume production for smaller-substrate applications...

If you work on 200mm or smaller substrates you *don't* need to buy a big, expensive 300mm plating tool from the Big Guys. Because now there's a smarter and much more affordable solution — called *Solstice*™..

Solstice is a unique new electroplating tool that's specifically designed for the world of smaller substrates. It gives you a cost-effective route from wet bench or development into *volume production* — and higher ROI!

Two Solstice models to choose from

Select the Solstice *LT* for development — or the *S8* for full cassette-to-cassette automation, with touch-screen control, GEM/SECSII interface, full reporting and a great deal more. It will give you a major boost, not only in throughput — but also in quality, uniformity and reliability. So you can do more, and do it better, with fewer people.

First-class products from a new ClassOne company...

In over a decade ClassOne Equipment has earned its reputation as the industry's first-class provider of refurbished tools. Now a new sister company, *ClassOne Technology*, is extending the first-class tradition — creating innovative *new* tools to address important needs that have been underserved by the big manufacturers.

So check out the new Solstice and see for yourself: It brings major new automation advantages without the big price tag. It really is “advanced plating for the rest of us!”

IDEAL FOR:

**MEMS,
SENSORS,
LEDS,
RF,
POWER,
EMERGING
